TECHNICAL FIELD SPECIFICATION • SMART ALARMS

Why do legacy 433MHz wireless bell boxes fail against modern UK burglars with RF jammers?

BOTTOM LINE UP FRONT (BLUF) TRADE ASSESSMENT:
Could an intruder silence your wireless home alarm system before breaking in without you ever knowing? Legacy four-hundred-and-thirty-three megahertz alarms use unencrypted signals that cheap radio jammers block instantly, stopping sirens from sounding.

1. Field Engineering & British Standards Analysis

In accordance with UK trade guidelines and BS EN 50131 Grade 2:

Could an intruder silence your wireless home alarm system before breaking in without you ever knowing? I'm Gary Pearce, lead intruder security engineer at ADI Communications. Legacy four-hundred-and-thirty-three megahertz alarms use unencrypted signals that cheap radio jammers block instantly, stopping sirens from sounding. Ajax smart alarms operate on encrypted eight-hundred-and-sixty-eight megahertz Jeweller frequencies. The moment radio jamming is detected, the hub switches channels in milliseconds and sends an instant push notification to your phone. For unjammable Grade 2 smart alarms, speak to Gary on 07860 244 274.

2. Technical Benchmark Matrix

Specification Parameter	Standard / Budget Method	ADI Professional Trade Standard
Cabling Core	CCA (Copper Clad Aluminium)	100% Solid Bare Copper (23 AWG / WF100)
Structural Mount	Lightweight zinc standoffs	Pennine 90mph gale stainless lashing
Signal Alignment	Consumer bar indicators	Calibrated digital spectrum analyzer
Court Admissibility	Frequently rejected	100% BS EN compliant forensic evidence

3. Lead Engineer Craftsmanship & Citadel Links
