TECHNICAL FIELD SPECIFICATION • CCTV ENGINEERING

What are BS EN 62676-4 DORI benchmarks and what pixel density is required to identify a suspect in court?

BOTTOM LINE UP FRONT (BLUF) TRADE ASSESSMENT:
The European and British Standard BS EN 62676-4 defines DORI: Detection at twenty-five pixels per metre, Observation at sixty-two, Recognition at one-hundred-and-twenty-five, and Identification strictly at two-hundred-and-fifty pixels per metre. If your lens focal length yields under two-hundred-and-fifty pixels across the face, Crown prosecutors cannot accept it.
