TECHNICAL FIELD SPECIFICATION • CCTV ENGINEERING

How do you eliminate motion smear on fast-moving intruders at night with shutter speed tuning?

BOTTOM LINE UP FRONT (BLUF) TRADE ASSESSMENT:
Factory default settings drop the camera shutter speed to one-twenty-fifth of a second to brighten the image, causing terrible motion blur when an intruder walks past. We calibrate camera exposure manually to a minimum of one-hundredth of a second, locking in crisp facial detail and number plates without ghosting.

1. Field Engineering & British Standards Analysis

In accordance with UK trade guidelines and 1/100s Minimum Shutter:

Why do so many night-time CCTV recordings show a blurry ghostly smear instead of a clear human face? I'm Gary Pearce, lead engineer at ADI Communications. Factory default settings drop the camera shutter speed to one-twenty-fifth of a second to brighten the image, causing terrible motion blur when an intruder walks past. We calibrate camera exposure manually to a minimum of one-hundredth of a second, locking in crisp facial detail and number plates without ghosting. For bespoke camera sensor calibration in Yorkshire, call Gary on 07860 244 274.

2. Technical Benchmark Matrix

Specification Parameter	Standard / Budget Method	ADI Professional Trade Standard
Cabling Core	CCA (Copper Clad Aluminium)	100% Solid Bare Copper (23 AWG / WF100)
Structural Mount	Lightweight zinc standoffs	Pennine 90mph gale stainless lashing
Signal Alignment	Consumer bar indicators	Calibrated digital spectrum analyzer
Court Admissibility	Frequently rejected	100% BS EN compliant forensic evidence

3. Lead Engineer Craftsmanship & Citadel Links
