TECHNICAL FIELD SPECIFICATION • SATELLITE TELECOMS

What is the 110-degree northern orbital cone requirement for Starlink satellite clearance?

BOTTOM LINE UP FRONT (BLUF) TRADE ASSESSMENT:
Starlink dishes track low Earth orbit satellites across a wide one-hundred-and-ten-degree northern sky cone. Even a single overhanging tree branch or roof apex inside that arc causes micro-dropouts as satellites pass behind it.

1. Field Engineering & British Standards Analysis

In accordance with UK trade guidelines and 110° Northern Cone Scan:

Why does your Starlink dish drop voice calls or video meetings even when the internet speed appears high? I'm Gary Pearce from ADI Communications. Starlink dishes track low Earth orbit satellites across a wide one-hundred-and-ten-degree northern sky cone. Even a single overhanging tree branch or roof apex inside that arc causes micro-dropouts as satellites pass behind it. We conduct precision field telemetry scans to determine the exact elevation and mast height required for zero obstructions. For a guaranteed clear line of sight, speak to Gary on 07860 244 274.

2. Technical Benchmark Matrix

Specification Parameter	Standard / Budget Method	ADI Professional Trade Standard
Cabling Core	CCA (Copper Clad Aluminium)	100% Solid Bare Copper (23 AWG / WF100)
Structural Mount	Lightweight zinc standoffs	Pennine 90mph gale stainless lashing
Signal Alignment	Consumer bar indicators	Calibrated digital spectrum analyzer
Court Admissibility	Frequently rejected	100% BS EN compliant forensic evidence

3. Lead Engineer Craftsmanship & Citadel Links

Lead Field Engineer: Gary Pearce • ADI Communications (Direct Mobile: **07860 244 274**)
