TECHNICAL FIELD SPECIFICATION • TV & BROADCAST

Why must double-screened CAI-benchmarked WF100 coaxial cable be used instead of standard brown RG6?

BOTTOM LINE UP FRONT (BLUF) TRADE ASSESSMENT:
Is old degraded brown coaxial cable strangling your television reception before the signal reaches your living room? Budget RG6 cable uses thin aluminium shielding and porous foam dielectric that absorbs rainwater over time, turning the cable into a water pipe.

1. Field Engineering & British Standards Analysis

In accordance with UK trade guidelines and CAI Benchmarked WF100:

Is old degraded brown coaxial cable strangling your television reception before the signal reaches your living room? I'm Gary Pearce, lead broadcast engineer at ADI Communications. Budget RG6 cable uses thin aluminium shielding and porous foam dielectric that absorbs rainwater over time, turning the cable into a water pipe. We install CAI-benchmarked WF100 cable with a solid pure copper core, solid copper foil, and copper braid shielding that completely blocks radio noise and withstands decades of British weather. For high-performance TV cabling, contact Gary on 07860 244 274.

2. Technical Benchmark Matrix

Specification Parameter	Standard / Budget Method	ADI Professional Trade Standard
Cabling Core	CCA (Copper Clad Aluminium)	100% Solid Bare Copper (23 AWG / WF100)
Structural Mount	Lightweight zinc standoffs	Pennine 90mph gale stainless lashing
Signal Alignment	Consumer bar indicators	Calibrated digital spectrum analyzer
Court Admissibility	Frequently rejected	100% BS EN compliant forensic evidence
