TECHNICAL FIELD SPECIFICATION • TV & BROADCAST

Why does digital Freeview TV pixelate when mobile phone masts are upgraded to 4G and 5G LTE?

BOTTOM LINE UP FRONT (BLUF) TRADE ASSESSMENT:
Has your television suddenly started glitching and pixelating on Freeview channels after a local mobile mast upgrade? Mobile networks now broadcast four-G and five-G LTE signals across former television frequencies.

1. Field Engineering & British Standards Analysis

In accordance with UK trade guidelines and 700/800MHz LTE Ingress:

Has your television suddenly started glitching and pixelating on Freeview channels after a local mobile mast upgrade? I'm Gary Pearce, certified aerial and broadcast engineer at ADI Communications. Mobile networks now broadcast four-G and five-G LTE signals across former television frequencies. These powerful mobile signals overload sensitive TV tuners, destroying reception. We fit high-rejection CAI-benchmarked LTE filters that cut interference by over fifty decibels, restoring crisp, stable television. For fast Freeview signal restoration across Yorkshire, call Gary on 07860 244 274.

2. Technical Benchmark Matrix

Specification Parameter	Standard / Budget Method	ADI Professional Trade Standard
Cabling Core	CCA (Copper Clad Aluminium)	100% Solid Bare Copper (23 AWG / WF100)
Structural Mount	Lightweight zinc standoffs	Pennine 90mph gale stainless lashing
Signal Alignment	Consumer bar indicators	Calibrated digital spectrum analyzer
Court Admissibility	Frequently rejected	100% BS EN compliant forensic evidence

3. Lead Engineer Craftsmanship & Citadel Links
