TECHNICAL FIELD SPECIFICATION • TV & BROADCAST

Can a chimney-mounted TV aerial withstand 80mph Pennine gales without damage to masonry?

BOTTOM LINE UP FRONT (BLUF) TRADE ASSESSMENT:
Are you worried your rooftop television aerial could blow down or pull chimney bricks off during the next big storm? High Pennine winds exert extreme leverage on old rusty brackets.

1. Field Engineering & British Standards Analysis

In accordance with UK trade guidelines and Eurocode 1 Wind Load:

Are you worried your rooftop television aerial could blow down or pull chimney bricks off during the next big storm? I'm Gary Pearce, lead rigger at ADI Communications, backed by ten million pounds public liability insurance. High Pennine winds exert extreme leverage on old rusty brackets. We secure aerials with galvanised welded steel brackets and stainless twin-wire lashing that clamps firmly around the stack without drilling into mortar. It withstands eighty-mile-per-hour gales without loosening. For storm-proof aerial repairs and installations, call Gary on 07860 244 274.

2. Technical Benchmark Matrix

Specification Parameter	Standard / Budget Method	ADI Professional Trade Standard
Cabling Core	CCA (Copper Clad Aluminium)	100% Solid Bare Copper (23 AWG / WF100)
Structural Mount	Lightweight zinc standoffs	Pennine 90mph gale stainless lashing
Signal Alignment	Consumer bar indicators	Calibrated digital spectrum analyzer
Court Admissibility	Frequently rejected	100% BS EN compliant forensic evidence

3. Lead Engineer Craftsmanship & Citadel Links
