TECHNICAL FIELD SPECIFICATION • TV & MEDIA WALLS

How deep must a mantelpiece be to deflect heat safely away from a wall-mounted TV?

BOTTOM LINE UP FRONT (BLUF) TRADE ASSESSMENT:
Without a heat shield, scorching air from the firebox cooks internal TV circuit boards. A solid mantelpiece projecting at least two hundred to two hundred and fifty millimetres creates an aerodynamic barrier.

1. Field Engineering & British Standards Analysis

In accordance with UK trade guidelines and 200-250mm Mantel Depth:

How can you protect a television mounted over a log burner from rising convection heat? I'm Gary Pearce from ADI Communications. Without a heat shield, scorching air from the firebox cooks internal TV circuit boards. A solid mantelpiece projecting at least two hundred to two hundred and fifty millimetres creates an aerodynamic barrier. It forces rising hot air forward into the room, reducing panel surface temperatures by twenty degrees. Combined with safe vertical clearances, your television stays completely protected. For expert fireplace TV installations, call Gary on 07860 244 274.

2. Technical Benchmark Matrix

Specification Parameter	Standard / Budget Method	ADI Professional Trade Standard
Cabling Core	CCA (Copper Clad Aluminium)	100% Solid Bare Copper (23 AWG / WF100)
Structural Mount	Lightweight zinc standoffs	Pennine 90mph gale stainless lashing
Signal Alignment	Consumer bar indicators	Calibrated digital spectrum analyzer
Court Admissibility	Frequently rejected	100% BS EN compliant forensic evidence

3. Lead Engineer Craftsmanship & Citadel Links

Lead Field Engineer: Gary Pearce • ADI Communications (Direct Mobile: **07860 244 274**)
Trade Credentials: 25+ Years Experience | £10,000,000 Public Liability Insurance | Qualified CCTV & Telecoms Specialist | Verified Rating: ★★★★★ 9.98/10 (84+ Reviews)
